INDEX TO AUTHORS

A

Abraham, Jean. See *Williams, Curtin, Abraham, Loosli, and Maynard,* 277

Adams, Elijah, Davis, Neil C., and **Smith, Emil L.** Specificity of prolidase: effect of alterations in the pyrrolidine ring of glycyl-L-proline, 573

Anchel, Marjorie, and **Cohen, Marvin P.** Studies with biformin. I. Its characterization as a polyacetylenic 9-carbon glycol, 319

Aprison, M. H., Magee, Wayne E., and **Burris, R. H.** Nitrogen fixation by excised soy bean root nodules, 29

Arroyave, Guillermo, and **Axelrod, Leonard R.** The paper chromatographic separation and qualitative identification of mixtures of $C_{19}O_3$ steroids, 579

Axelrod, Julius. See *Brodie, Axelrod, Shore, and Udenfriend,* 741

—. See *Udenfriend, Clark, Axelrod, and Brodie,* 731

Axelrod, Leonard R. See *Arroyave and Axelrod,* 579

B

Ballou, John E. See *Thompson and Ballou,* 883

Banks, J. See *Williams-Ashman and Banks,* 337

Barclay, Ralph K., Garfinkel, Esther, and **Stock, C. Chester.** The influence of *N*-methylformamide on C^{14}-formate incorporation. I. In nucleic acids of rat liver, 875

Barron, E. S. Guzman. See *Rothschild, Cori, and Barron,* 41

Bernstein, Philip. See *Ravin, Bernstein, and Seligman,* 1

Berry, James F., and **Stotz, Elmer.** Effect of acetaldehyde on the synthesis of acetylcholine, acetoin, and citric acid in rat brain preparations, 591

Borries, Eleanor. See *Dietrich and Borries,* 287

Brodie, Bernard B., Axelrod, Julius, Shore, Parkhurst A., and **Udenfriend, Sidney.** Ascorbic acid in aromatic hydroxylation. II. Products formed by reaction of substrates with ascorbic acid, ferrous ion, and oxygen, 741

—. See *Udenfriend, Clark, Axelrod, and Brodie,* 731

Burris, R. H. See *Aprison, Magee, and Burris,* 29

—. See *Wilson, King, and Burris,* 863

C

Cajori, F. A., Otani, Theodore T., and **Hamilton, Mary Alice.** The isolation and some properties of an antibiotic from *Fusarium bostrycoides,* 107

Cardinal, Ruth. See *Lowry, Ziegler, Cardinal, and Watson,* 543

Cerceo, Emily. See *Pearlman, Cerceo, and Thomas,* 231

Chaykin, Sterling. See *Rafter, Chaykin, and Krebs,* 799

Cheldelin, Vernon H. See *King and Cheldelin,* 821

Chu, Edith Ju-Hwa. See *Chu and Chu,* 537

Chu, T. C., and **Chu, Edith Ju-Hwa.** Paper chromatography of methyl esters of dicarboxylic porphyrins, 537

Chung, C. W., and **Nickerson, Walter J.** Polysaccharide syntheses in growing yeasts, 395

Clark, Carroll T. See *Udenfriend, Clark, Axelrod, and Brodie,* 731

Cleland, W. W., and **Johnson, Marvin J.** Tracer experiments of the mechanism of citric acid formation by *Aspergillus niger,* 679

Cockburn, R. M. See *Hutchens, Van Bruggen, Cockburn, and West,* 115

Cohen, Marvin P. See *Anchel and Cohen,* 319

Considine, W. J. See *Rosenfeld, Hellman, Considine, and Gallagher,* 73
Coon, Minor J. See *Levy and Coon,* 691
Cori, Osvaldo. See *Rothschild, Cori, and Barron,* 41
Craine, E. M. See *Hansen and Craine,* 293
Crandall, Dana I., and **Halikis, Demetreos N.** Homogentisic acid oxidase. I. Distribution in animal tissues and relation to tyrosine metabolism in rat kidney, 629
Curtin, Leo V. See *Williams, Curtin, Abraham, Loosli, and Maynard,* 277
Cushing, Ivan. See *Vanatta and Cushing,* 195

D

Davis, Neil C. See *Adams, Davis, and Smith,* 573
Deutsch, H. F. Fetuin: the mucoprotein of fetal calf serum, 669
Dhungat, S. B., and **Sreenivasan, A.** The use of pyrophosphate buffer for the manometric assay of xanthine oxidase, 845
Dietrich, L. S., and **Borries, Eleanor.** On the determination of xanthine oxidase activity in animal tissues, 287
Dische, Zacharias, Weil, Rudolf, and **Landsberg, Edith.** A new color reaction for keto acids and other carbonyl compounds, 23
Doisy, E. A., Jr. See *Hyde, Elliott, Doisy, and Doisy,* 521
—. See *Shen, Elliott, Doisy, and Doisy,* 133
Doisy, Edward A. See *Hyde, Elliott, Doisy, and Doisy,* 521
—. See *Shen, Elliott, Doisy, and Doisy,* 133
Dowling, Marian T. See *Simmonds, Dowling, and Stone,* 701
Dutton, H. J. See *Scholfield and Dutton,* 461

E

Effersøe, Poul G. See *Kirk, Hansen, Effersøe, and Iversen,* 17
Elion, Gertrude B., Singer, Samuel, and **Hitchings, George H.** Antagonists of nucleic acid derivatives. VIII. Synergism in combinations of biochemically related antimetabolites, 477
Elliott, William H. See *Hyde, Elliott, Doisy, and Doisy,* 521
—. See *Shen, Elliott, Doisy, and Doisy,* 133

F

Flexner, Louis B. See *Nemeth, Insull, and Flexner,* 765
Friedkin, Morris. See *Strominger and Friedkin,* 663

G

Gallagher, T. F. See *Rosenfeld, Hellman, Considine, and Gallagher,* 73
Garfinkel, Esther. See *Barclay, Garfinkel, and Stock,* 875
Genghof, Dorothy S. See *Melville, Genghof, and Lee,* 503
Geyer, R. P. See *Lyon and Geyer,* 529
Gibbs, Martin, and **Horecker, B. L.** The mechanism of pentose phosphate conversion to hexose monophosphate. II. With pea leaf and pea root preparations, 813
Goldman, Dexter S. Studies on the fatty acid oxidizing system of animal tissues. VII. The β-ketoacyl coenzyme A cleavage enzyme, 345
Gray, Patricia. See *Hansen and Craine,* 293
Green, Irving. See *Mommaerts and Green,* 833
Gurin, Samuel. See *Rabinowitz and Gurin,* 307
György, Paul. See *Zilliken, Smith, Rose, and György,* 299

H

Halikis, Demetreos N. See *Crandall and Halikis,* 629
Hamilton, Mary Alice. See *Cajori, Otani, and Hamilton,* 107

Hamilton, Mary G. See *Petermann, Robbins, and Hamilton,* 369
Hansen, Per From. See *Kirk, Hansen, Effersøe, and Iversen,* 17
Hansen, R. G., and **Craine, E. M.** Lactose metabolism. III. The reversible conversion of galactose-1-phosphate to glucose-1-phosphate, 293
Haugaard, Ella S. See *Haugaard, Vaughan, Haugaard, and Stadie,* 549
Haugaard, Niels, Vaughan, Martha, Haugaard, Ella S., and **Stadie, William C.** Studies of radioactive injected labeled insulin, 549
Hausberger, F. X., Milstein, Seymour W., and **Rutman, Robert J.** The influence of insulin on glucose utilization in adipose and hepatic tissues *in vitro,* 431
Heimberg, Murray, and **Velick, Sidney F.** The synthesis of aldolase and phosphorylase in rabbits, 725
Hellman, Leon. See *Rosenfeld, Hellman, Considine, and Gallagher,* 73
Heplar, Joseph Q., and **Tatum, E. L.** Some factors affecting carbon dioxide metabolism in *Neurospora crassa,* 489
Hitchings, George H. See *Elion, Singer, and Hitchings,* 477
Horecker, B. L. See *Gibbs and Horecker,* 813
Hutchens, T. T., Van Bruggen, J. T., Cockburn, R. M., and **West, Edward S.** The effect of fasting upon tissue lipogenesis in the intact rat, 115
Hyde, Paul M., Elliott, William H., Doisy, E. A., Jr., and **Doisy, Edward A.** Synthesis and metabolic studies of 17-methyl-C^{14}-testosterone, 521

I

Insull, William, Jr. See *Nemeth, Insull, and Flexner,* 765
Iversen, Kurt. See *Kirk, Hansen, Effersøe, and Iversen,* 17

J

Johnson, Marvin J. See *Cleland and Johnson,* 679

K

King, K. W. See *Wilson, King, and Burris,* 863
King, Tsoo E., and **Cheldelin, Vernon H.** Pyruvic carboxylase of *Acetobacter suboxydans,* 821
Kirk, John Esben, Hansen, Per From, Effersøe, Poul G., and **Iversen, Kurt.** A procedure for determination of the respiration of avascular and poorly vascularized tissue membranes, 17
Koerner, James F. See *Sinsheimer,* 445
Koshland, D. E., Jr., and **Stein, Sylvia S.** Correlation of bond breaking with enzyme specificity. Cleavage point of invertase, 139
Krebs, Edwin G. See *Rafter, Chaykin, and Krebs,* 799
Kurzmann, Gloria. See *Taussky,* 853

L

Landsberg, Edith. See *Dische, Weil, and Landsberg,* 23
Lee, Johanna M. See *Melville, Genghof, and Lee,* 503
Levy, Louis, and **Coon, Minor J.** Biosynthesis of histidine from radioactive acetate and glucose, 691
Lindenbaum, Arthur. See *Schubert and Lindenbaum,* 359
Linker, Alfred. See *Weissmann, Meyer, Sampson, and Linker,* 417
Loosli, J. K. See *Williams, Curtin, Abraham, Loosli, and Maynard,* 277
Lowry, P. T., Ziegler, N. R., Cardinal, Ruth, and **Watson, C. J.** The conversion of N^{15}-labeled mesobilirubinogen to stercobilinogen by fecal bacteria, 543
Lunan, K. See *Sinsheimer,* 445
Lyon, I., and **Geyer, R. P.** Fatty acid metabolism and hepatic lipogenesis, 529

M

Magee, Wayne E. See *Aprison, Magee, and Burris,* 29

Martignoni, Pasquale, and **Winnick, Theodore.** Biosynthesis of carnosine and anserine in the chick, 251
Mathura, Gharbharan R. See *West and Mathura,* 315
Maynard, L. A. See *Williams, Curtin, Abraham, Loosli, and Maynard,* 277
McGilvery, R. W. See *Pogell and McGilvery,* 149
McIntosh, Nancy. See *Miller,* 327
McManus, I. Rosabelle. The biosynthesis of valine by *Saccharomyces cerevisiae,* 639
Melchior, Norten C. Sodium and potassium complexes of adenosinetriphosphate: equilibrium studies, 615
Melville, Donald B. Biotin sulfoxide, 495
—, **Genghof, Dorothy S.,** and **Lee, Johanna M.** Biological properties of biotin *d*- and *l*-sulfoxides, 503
Meyer, Karl. See *Weissmann, Meyer, Sampson, and Linker,* 417
Miller, Zelma. Effects of an adrenocortical extract on tissue glycolysis *in vitro,* 327
Milstein, Seymour W. See *Hausberger, Milstein, and Rutman,* 431
Mitchell, Herschel K. See *Tissieres and Mitchell,* 241
Mokrasch, Lewis C. Analysis of hexose phosphates and sugar mixtures with the anthrone reagent, 55
Mommaerts, W. F. H. M., and **Green, Irving.** Adenosinetriphosphatase systems of muscle. III. A survey of the adenosinetriphosphatase activity of myosin, 833

N

Nason, Alvin. See *Wosilait and Nason,* 785
Neilands, J. B. Studies on lactic dehydrogenase of heart. III. Action of inhibitors, 225
Nemeth, Andrew M. Glucose-6-phosphatase in the liver of the fetal guinea pig, 773
Nemeth, Andrew M., Insull, William, Jr., and **Flexner, Louis B.** Glycogenesis in the liver of the fetal guinea pig, 765
Newhouse, Adrienne. See *Saifer and Newhouse,* 159
Nickerson, Walter J. See *Chung and Nickerson,* 395
—. See *Romano and Nickerson,* 409

O

Otani, Theodore T. See *Cajori, Otani, and Hamilton,* 107

P

Pazur, John H. The mechanism of enzymatic synthesis of galactosyl oligosaccharides, 439
Pearlman, W. H., Cerceo, Emily, and **Thomas, Millicent.** The conversion of Δ^5-pregnen-3β-ol-20-one to progesterone by homogenates of human placental tissue, 231
Petermann, Mary L., Robbins, Jacob, and **Hamilton, Mary G.** Sedimentation of the thyroxine-binding protein of serum in the partition cell, 369
—. See *Robbins, Petermann, and Rall,* 387
Plaut, G. W. E. Biosynthesis of riboflavin. I. Incorporation of C^{14}-labeled compounds into rings B and C, 513
Pogell, Burton M., and **McGilvery, R. W.** Partial purification of fructose-1,6-diphosphatase, 149

R

Rabinowitz, Joseph L., and **Gurin, Samuel.** Biosynthesis of cholesterol and β-hydroxy-β-methylglutaric acid by extracts of liver, 307
Rafter, Gale W., Chaykin, Sterling, and **Krebs, Edwin G.** The action of glyceraldehyde-3-phosphate dehydrogenase on reduced diphosphopyridine nucleotide, 799
Rall, J. E. See *Robbins, Petermann, and Rall,* 387

Ravin, Herbert A., Bernstein, Philip, and **Seligman, Arnold M.** A colorimetric micromethod for the estimation of chymotrypsin activity, 1

Rege, D. V., and **Sreenivasan, A.** Conversion of uracil to thymine by strains of *Bacillus subtilis*, 471

Rittenberg, Sydney C. See *Slotnick, Visser, and Rittenberg*, 217

Robbins, Jacob. Thyroglobulin in serum after I^{131} therapy. I. Salting out, 377

—, **Petermann, Mary L.,** and **Rall, J. E.** Thyroglobulin in serum after I^{131} therapy. II. Sedimentation in the ultracentrifuge, 387

—. See *Petermann, Robbins, and Hamilton*, 369

Roe, Joseph H. The determination of dextran in blood and urine with anthrone reagent, 889

Romano, Antonio H., and **Nickerson, Walter J.** Cystine reductase of pea seeds and yeasts, 409

Rose, Catharine S. See *Zilliken, Smith, Rose, and György*, 299

Rosenfeld, R. S., Hellman, Leon, Considine, W. J., and **Gallagher, T. F.** Isolation of radioactive cholesterol from plasma, 73

Rosenthal, Sanford M. See *Tabor, Tabor, and Rosenthal*, 645

Roth, Jay S. Ribonuclease. III. Ribonuclease activity in rat liver and kidney, 181

Rothschild, H. A., Cori, Osvaldo, and **Barron, E. S. Guzman.** The components of choline oxidase and aerobic phosphorylation coupled with choline oxidation, 41

Rutman, Robert J. See *Hausberger, Milstein, and Rutman*, 431

S

Saifer, Abraham, and **Newhouse, Adrienne.** Photometric microdetermination of plasma fibrinogen with a thrombin-ninhydrin procedure, 159

Sampson, Phyllis. See *Weissmann, Meyer, Sampson, and Linker*, 417

Schachter, David, and **Taggart, John V.** Glycine *N*-acylase: purification and properties, 263

Scholfield, C. R., and **Dutton, H. J.** Separations of soy bean inositide fractions of low partition coefficient, 461

Schubert, Jack, and **Lindenbaum, Arthur.** Studies on the mechanism of protection by aurintricarboxylic acid in beryllium poisoning. II. Equilibria involving alkaline phosphatase, 359

Schweet, Richard S. The quantitative determination of proline and pipecolic acid with ninhydrin, 603

Seligman, Arnold M. See *Ravin, Bernstein, and Seligman*, 1

Shen, Nai-Hsuan Chang, Elliott, William H., Doisy, E. A., Jr., and **Doisy, Edward A.** The excretion of metabolites of progesterone-21-C^{14} after intragastric administration to rats, 133

Sherry, Sol, and **Troll, Walter.** The action of thrombin on synthetic substrates, 95

—. See *Troll, Sherry, and Wachman*, 85

Shore, Parkhurst A. See *Brodie, Axelrod, Shore, and Udenfriend*, 741

Siegel, Jack M. The photosynthetic metabolism of acetone by *Rhodopseudomonas gelatinosa*, 205

Simmonds, Sofia, Dowling, Marian T., and **Stone, David.** Metabolism of phenylalanine and tyrosine by *Escherichia coli* strain K-12, 701

Simpson, Melvin V., and **Velick, Sidney F.** The synthesis of aldolase and glyceraldehyde-3-phosphate dehydrogenase in the rabbit, 61

Singer, Samuel. See *Elion, Singer, and Hitchings*, 477

Sinsheimer, Robert L. The action of pancreatic desoxyribonuclease. I. Isolation of mono- and dinucleotides, 445

Slotnick, Irving J., Visser, Donald W., and **Rittenberg, Sydney C.** Degradation of substituted pyrimidine nucle-

osides by *Escherichia coli* and *Bacillus subtilis*, 217
Smith, Emil L. See *Adams, Davis, and Smith*, 573
—. See *Van Orden and Smith*, 751
Smith, Phyllis N. See *Zilliken, Smith, Rose, and György*, 299
Sreenivasan, A. See *Dhungat and Sreenivasan*, 845
—. See *Rege and Sreenivasan*, 471
Stadie, William C. See *Haugaard, Vaughan, Haugaard, and Stadie*, 549
Stein, Sylvia S. See *Koshland and Stein*, 139
Stock, C. Chester. See *Barclay, Garfinkel, and Stock*, 875
Stone, David. See *Simmonds, Dowling, and Stone*, 701
Stotz, Elmer. See *Berry and Stotz*, 591
Strominger, Donald B., and **Friedkin, Morris.** Enzymatic synthesis of thiouracil riboside and thiouracil desoxyriboside, 663

T

Tabor, Celia White, Tabor, Herbert, and **Rosenthal, Sanford M.** Purification of amine oxidase from beef plasma, 645
Tabor, Herbert. See *Tabor, Tabor, and Rosenthal*, 645
Taggart, John V. See *Schachter and Taggart*, 263
Tatum, E. L. See *Heplar and Tatum*, 489

Thomas, Millicent. See *Pearlman, Cerceo, and Thomas*, 231
Thompson, E. O. P. The *N*-terminal sequence of serum albumins; observations on the thiohydantoin method, 565
Thompson, Roy C., and **Ballou, John E.** Studies of metabolic turnover with tritium as a tracer. IV. Metabolically inert lipide and protein fractions from the rat, 883
Tissieres, Alfred, and **Mitchell, Herschel K.** Cytochromes and respiratory activities in some slow growing strains of *Neurospora*, 241
Troll, Walter, Sherry, Sol, and **Wachman, John.** The action of plasmin on synthetic substrates, 85
—. See *Sherry and Troll*, 95

U

Udenfriend, Sidney, Clark, Carroll T., Axelrod, Julius, and **Brodie, Bernard B.** Ascorbic acid in aromatic hydroxylation. I. A model system for aromatic hydroxylation, 731
—. See *Brodie, Axelrod, Shore, and Udenfriend*, 741

V

Vadla, Jostein. See *Sinsheimer*, 445
Vanatta, John C., and **Cushing, Ivan.** The determination of total base of serum with an ion exchange resin conditioned as iodate, 195
Van Bruggen, J. T. See *Hutchens, Van Bruggen, Cockburn, and West*, 115
Van Orden, Harris O., and **Smith, Emil L.** The synthesis of arginyl dipeptides; the action of papain and trypsin, 751
Vaughan, Martha. See *Haugaard, Vaughan, Haugaard, and Stadie*, 549
Velick, Sidney F. See *Heimberg and Velick*, 725
—. See *Simpson and Velick*, 61
Visser, Donald W. See *Slotnick, Visser, and Rittenberg*, 217
Volk, Wesley A. The effect of fluoride on the permeability and phosphatase activity of *Propionibacterium pentosaceum*, 777

W

Wachman, John. See *Troll, Sherry, and Wachman*, 85
Watson, C. J. See *Lowry, Ziegler, Cardinal, and Watson*, 543
Weil, Rudolf. See *Dische, Weil, and Landsberg*, 23

Weissmann, Bernard, Meyer, Karl, Sampson, Phyllis, and **Linker, Alfred.** Isolation of oligosaccharides enzymatically produced from hyaluronic acid, 417

West, Edward S. See *Hutchens, Van Bruggen, Cockburn, and West,* 115

West, Harold D., and **Mathura, Gharbharan R.** Synthesis of some aryl-substituted L-cysteines and their fate in the animal body, 315

Williams, Harold H., Curtin, Leo V., Abraham, Jean, Loosli, J. K., and **Maynard, L. A.** Estimation of growth requirements for amino acids by assay of the carcass, 277

Williams-Ashman, H. G., and **Banks, J.** The synthesis and degradation of citric acid by ventral prostate tissue. I. Enzymatic mechanisms, 337

Wilson, D. G., King, K. W., and **Burris, R. H.** Transamination reactions in plants, 863

Wilson, Irwin B. The active surface of the serum esterase, 123

Winnick, Theodore. See *Martignoni and Winnick,* 251

Wosilait, Walter D., and **Nason, Alvin.** Pyridine nucleotide-menadione reductase from *Escherichia coli,* 785

Z

Ziegler, N. R. See *Lowry, Ziegler, Cardinal, and Watson,* 543

Zilliken, Friedrich, Smith, Phyllis N., Rose, Catharine S., and **György, Paul.** Enzymatic synthesis of a growth factor for *Lactobacillus bifidus* var. Penn, 299

INDEX TO SUBJECTS

A

Acetaldehyde: Brain acetoin synthesis, effect, *Berry and Stotz*, 591
— acetylcholine synthesis, effect, *Berry and Stotz*, 591
— citric acid synthesis, effect, *Berry and Stotz*, 591

Acetate: Radioactive, histidine biosynthesis, relation, *Levy and Coon*, 691

Acetobacter suboxydans: Pyruvic carboxylase, *King and Cheldelin*, 821

Acetoin: Synthesis, brain, acetaldehyde effect, *Berry and Stotz*, 591

Acetone: Metabolism, photosynthesis, *Rhodopseudomonas gelatinosa* effect, *Siegel*, 205

Acetylcholine: Synthesis, brain, acetaldehyde effect, *Berry and Stotz*, 591

Acylase: Glycine *N*-. *See* Glycine *N*-acylase

Adenosinetriphosphatase: Muscle, *Mommaerts and Green*, 833
Myosin, *Mommaerts and Green*, 833

Adenosinetriphosphate: Potassium complexes, *Melchior*, 615
Sodium complexes, *Melchior*, 615

Adipose tissue: Glucose utilization, insulin effect, *Hausberger, Milstein, and Rutman*, 431

Adrenal(s): Cortex, extract, tissue glycolysis, effect, *Miller*, 327

Albumin: Blood serum, nitrogen-terminal sequence, *Thompson*, 565

Aldolase: Biosynthesis, *Simpson and Velick*, 61
Heimberg and Velick, 725

Amine oxidase: Purification, blood plasma, *Tabor, Tabor, and Rosenthal*, 645

Amino acid(s): Growth requirements, determination, *Williams, Curtin, Abraham, Loosli, and Maynard*, 277

Anserine: Biosynthesis, *Martignoni and Winnick*, 251

Antibiotic: *Fusarium bostrycoides, Cajori, Otani, and Hamilton*, 107

Antimetabolite(s): Biochemically related, synergism, *Elion, Singer, and Hitchings*, 477

Arginyl dipeptide(s): Synthesis, papain and trypsin relation, *Van Orden and Smith*, 751

Ascorbic acid: Hydroxylation, aromatic, relation, *Udenfriend, Clark, Axelrod, and Brodie*, 731
Brodie, Axelrod, Shore, and Udenfriend, 741

Aspergillus niger: Citric acid formation, mechanism, *Cleland and Johnson*, 679

Aurintricarboxylic acid: Beryllium poisoning, protection mechanism, phosphatase, alkaline, relation, *Schubert and Lindenbaum*, 359

B

Bacillus: *See also Lactobacillus*

Bacillus subtilis: Pyrimidine nucleosides, substituted, degradation, effect, *Slotnick, Visser, and Rittenberg*, 217
Uracil conversion to thymine, effect, *Rege and Sreenivasan*, 471

Bacteria: Feces, stercobilinogen formation from nitrogen 15-labeled mesobilirubinogen, effect, *Lowry, Ziegler, Cardinal, and Watson*, 543
See also Acetobacter, Escherichia, Propionibacterium, Rhodopseudomonas

Base: Total, blood serum, determination, *Vanatta and Cushing*, 195

Bean: Soy, inositide fractions, separation, *Scholfield and Dutton*, 461
—, root nodules, nitrogen fixation, *Aprison, Magee, and Burris*, 29

Beryllium: Poisoning, aurintricarboxylic acid protection mechanism, phosphatase, alkaline, relation, *Schubert and Lindenbaum*, 359

Biformin: Glycol, 9-carbon, polyacetylenic, relation, *Anchel and Cohen*, 319
Biotin sulfoxide: *Melville*, 495
Biotin *d*-sulfoxide: Biological properties, *Melville, Genghof, and Lee*, 503
Biotin *l*-sulfoxide: Biological properties, *Melville, Genghof, and Lee*, 503
Blood: Dextran determination, *Roe*, 889
Blood plasma: Amine oxidase, purification, *Tabor, Tabor, and Rosenthal*, 645
Cholesterol, radioactive, isolation, *Rosenfeld, Hellman, Considine, and Gallagher*, 73
Fibrinogen, determination, photometric, *Saifer and Newhouse*, 159
Blood serum: Albumin, nitrogen-terminal sequence, *Thompson*, 565
Base, total, determination, *Vanatta and Cushing*, 195
Esterase, surface, *Wilson*, 123
Fetus, mucoprotein, *Deutsch*, 669
Thyroglobulin, iodine 131 therapy, effect, *Robbins*, 377
Robbins, Petermann, and Rall, 387
Thyroxine-binding protein, *Petermann, Robbins, and Hamilton*, 369
Brain: Acetoin synthesis, acetaldehyde effect, *Berry and Stotz*, 591
Acetylcholine synthesis, acetaldehyde effect, *Berry and Stotz*, 591
Citric acid synthesis, acetaldehyde effect, *Berry and Stotz*, 591

C

Carbon dioxide: Metabolism, *Neurospora crassa, Heplar and Tatum*, 489
Carbonyl compound(s): Color reaction, *Dische, Weil, and Landsberg*, 23
Carboxylase: Pyruvic. *See* Pyruvic carboxylase
Carboxylic acid: Aurintri-. *See* Aurintricarboxylic acid
Carnosine: Biosynthesis, *Martignoni and Winnick*, 251
Cholesterol: Biosynthesis, liver effect, *Rabinowitz and Gurin*, 307
Cholesterol—*continued:*
Radioactive, isolation, blood plasma, *Rosenfeld, Hellman, Considine, and Gallagher*, 73
Choline: Acetyl-. *See* Acetylcholine
Oxidation, phosphorylation, aerobic, relation, *Rothschild, Cori, and Barron*, 41
Choline oxidase: *Rothschild, Cori, and Barron*, 41
Chymotrypsin: Determination, micro-, colorimetric, *Ravin, Bernstein, and Seligman*, 1
Citric acid: Formation, *Aspergillus niger*, mechanism, *Cleland and Johnson*, 679
Synthesis and degradation, prostate enzymes, effect, *Williams-Ashman and Banks*, 337
—, brain, acetaldehyde effect, *Berry and Stotz*, 591
Coenzyme(s): A, ketoacyl. *See* Ketoacyl coenzyme A
Creatine: Urine, determination, colorimetric, micro-, *Taussky*, 853
Cysteine(s): L-, aryl-substituted, synthesis and metabolism, *West and Mathura*, 315
Cystine reductase: Pea seeds, *Romano and Nickerson*, 409
Yeast, *Romano and Nickerson*, 409
Cytochrome(s): *Neurospora*, *Tissieres and Mitchell*, 241

D

Dehydrogenase: Glyceraldehyde-3-phosphate. *See* Glyceraldehyde-3-phosphate dehydrogenase
Lactic. *See* Lactic dehydrogenase
Deoxyribonuclease: Pancreas, mono- and dinucleotides, isolation, relation, *Sinsheimer*, 445
Dextran: Blood, determination, *Roe*, 889
Urine, determination, *Roe*, 889
Dinucleotide(s): Isolation, deoxyribonuclease, pancreatic, relation, *Sinsheimer*, 445
Dipeptide(s): Arginyl. *See* Arginyl dipeptide

Diphosphatase: Fructose-1,6-. *See* Fructose-1,6-diphosphatase
Diphosphopyridine nucleotide: Reduced, glyceraldehyde-3-phosphate dehydrogenase effect, *Rafter, Chaykin, and Krebs,* 779

E

Enzyme(s): Galactosyl oligosaccharides, synthesis, mechanism, *Pazur,* 439
β-Ketoacyl coenzyme A cleavage, *Goldman,* 345
Lactobacillus bifidus growth factor, synthesis, *Zilliken, Smith, Rose, and György,* 299
Oligosaccharides, formation from hyaluronic acid, *Weissmann, Meyer, Sampson, and Linker,* 417
Prostate, citric acid synthesis and degradation, effect, *Williams-Ashman and Banks,* 337
Specificity, *Koshland and Stein,* 139
Thiouracil deoxyriboside synthesis, *Strominger and Friedkin,* 663
— riboside synthesis, *Strominger and Friedkin,* 663
See also Adenosinetriphosphatase, Aldolase, etc.
Escherichia coli: Phenylalanine metabolism, effect, *Simmonds, Dowling, and Stone,* 701
Pyridine nucleotide-menadione reductase, *Wosilait and Nason,* 785
Pyrimidine nucleosides, substituted, degradation, effect, *Slotnick, Visser, and Rittenberg,* 217
Tyrosine metabolism, effect, *Simmonds, Dowling, and Stone,* 701
Esterase: Blood serum, surface, *Wilson,* 123

F

Fasting: Tissue lipogenesis, effect, *Hutchens, Van Bruggen, Cockburn, and West,* 115
Fat(s): *See also* Adipose tissue
Fatty acid: Metabolism, hepatic lipogenesis and, *Lyon and Geyer,* 529
Oxidizing system, *Goldman,* 345
Feces: Bacteria, stercobilinogen formation from nitrogen 15-labeled mesobilirubinogen, effect, *Lowry, Ziegler, Cardinal, and Watson,* 543
Fetuin: *Deutsch,* 669
Fetus: Blood serum mucoprotein, *Deutsch,* 669
Liver glucose-6-phosphatase, *Nemeth,* 773
— glycogenesis, *Nemeth, Insull, and Flexner,* 765
Fibrinogen: Blood plasma, determination, photometric, *Saifer and Newhouse,* 159
Fluoride: *Propionibacterium pentosaceum* phosphatase, effect, *Volk,* 777
Formate: Carbon 14-labeled, incorporation in liver nucleic acids, *N*-methylformamide effect, *Barclay, Garfinkel, and Stock,* 875
Fructose-1,6-diphosphatase: Purification, *Pogell and McGilvery,* 149
Fungus: *See also Aspergillus*
Fusarium bostrycoides: Antibiotic, *Cajori, Otani, and Hamilton,* 107

G

Galactose-1-phosphate: Glucose-1-phosphate reversible conversion from, *Hansen and Craine,* 293
Galactosyl oligosaccharide(s): Synthesis, enzymatic, mechanism, *Pazur,* 439
Globulin: Thyro-. *See* Thyroglobulin
Glucose: Radioactive, histidine biosynthesis, relation, *Levy and Coon,* 691
Utilization, adipose and hepatic tissues, insulin effect, *Hausberger, Milstein, and Rutman,* 431
Glucose-6-phosphatase: Liver, fetus, *Nemeth,* 773
Glucose-1-phosphate: Galactose-1-phosphate reversible conversion to, *Hansen and Craine,* 293
Glutaric acid: β-Hydroxy-β-methyl-. *See* Hydroxy-β-methylglutaric acid
Glyceraldehyde-3-phosphate dehydrogenase: Biosynthesis, *Simpson and Velick,* 61

Glyceraldehyde-3-phosphate dehydrogenase—*continued:*
Diphosphopyridine nucleotide, reduced, effect, *Rafter, Chaykin, and Krebs,* 799
Glycine *N*-acylase: Purification and properties, *Schachter and Taggart,* 263
Glycogenesis: Liver, fetus, *Nemeth, Insull, and Flexner,* 765
Glycol: 9-Carbon, polyacetylenic, biformin relation, *Anchel and Cohen,* 319
Glycolysis: Tissue, adrenocortical extract, effect, *Miller,* 327
Glycyl-L-proline: Prolidase specificity, relation, *Adams, Davis, and Smith,* 573
Growth: Amino acids, requirements, determination, *Williams, Curtin, Abraham, Loosli, and Maynard,* 277

H

Heart: Lactic dehydrogenase, inhibitors, *Neilands,* 225
Hexose monophosphate: Pentose phosphate conversion to, pea leaf and root, effect, *Gibbs and Horecker,* 813
Hexose phosphate(s): Determination, anthrone reagent use, *Mokrasch,* 55
Histidine: Biosynthesis, acetate and glucose, radioactive, relation, *Levy and Coon,* 691
Homogentisic acid oxidase: *Crandall and Halikis,* 629
Kidney tyrosine metabolism, relation, *Crandall and Halikis,* 629
Hyaluronic acid: Oligosaccharides, formation from, enzymatic, *Weissmann, Meyer, Sampson, and Linker,* 417
Hydroxylation: Aromatic, ascorbic acid relation, *Udenfriend, Clark, Axelrod, and Brodie,* 731
Brodie, Axelrod, Shore, and Udenfriend, 741
—, model system, *Udenfriend, Clark, Axelrod, and Brodie,* 731
Hydroxy-β-methylglutaric acid: β-, biosynthesis, liver effect, *Rabinowitz and Gurin,* 307

I

Inositide: Fractions, soy bean, separation, *Scholfield and Dutton,* 461
Insulin: Glucose utilization, adipose and hepatic tissues, effect, *Hausberger, Milstein, and Rutman,* 431
Radioactive, injection effect, *Haugaard, Vaughan, Haugaard, and Stadie,* 549
Invertase: Cleavage point, *Koshland and Stein,* 139
Iodine: Mass 131, therapy, blood serum thyroglobulin, effect, *Robbins,* 377
Robbins, Petermann, and Rall, 387

K

Keto acid(s): Color reaction, *Dische, Weil, and Landsberg,* 23
Ketoacyl coenzyme A: β-, cleavage enzyme, *Goldman,* 345
Kidney: Ribonuclease, *Roth,* 181
Tyrosine metabolism, homogentisic acid oxidase relation, *Crandall and Halikis,* 629

L

Lactic dehydrogenase: Heart, inhibitors, *Neilands,* 225
Lactobacillus bifidus: Growth factor, synthesis, enzymatic, *Zilliken, Smith, Rose, and György,* 299
Lactose: Metabolism, *Hansen and Craine,* 293
Lipide: Turnover, tritium as tracer, *Thompson and Ballou,* 883
Lipogenesis: Liver, fatty acid metabolism and, *Lyon and Geyer,* 529
Tissue, fasting effect, *Hutchens, Van Bruggen, Cockburn, and West,* 115
Liver: Cholesterol biosynthesis, effect, *Rabinowitz and Gurin,* 307
Fetus, glucose-6-phosphatase, *Nemeth,* 773
—, glycogenesis, *Nemeth, Insull, and Flexner,* 765

Liver—*continued:*
Glucose utilization, insulin effect, *Hausberger, Milstein, and Rutman*, 431
β-Hydroxy-β-methylglutaric acid biosynthesis, effect, *Rabinowitz and Gurin*, 307
Lipogenesis, fatty acid metabolism and, *Lyon and Geyer*, 529
Nucleic acids, C^{14}-formate incorporation, *N*-methylformamide effect, *Barclay, Garfinkel, and Stock*, 875
Ribonuclease, *Roth*, 181

M

Mesobilirubinogen: Nitrogen 15-labeled, stercobilinogen formation from, fecal bacteria, effect, *Lowry, Ziegler, Cardinal, and Watson*, 543
Metabolism: Turnover, tritium as tracer, *Thompson and Ballou*, 883
Methylformamide: *N*-, C^{14}-formate incorporation in liver nucleic acids, effect, *Barclay, Garfinkel, and Stock*, 875
Methyltestosterone: Carbon 14-labeled, synthesis and metabolism, *Hyde, Elliott, Doisy, and Doisy*, 521
Mold: *See also Fusarium, Neurospora*
Mononucleotide(s): Isolation, deoxyribonuclease, pancreatic, relation, *Sinsheimer*, 445
Mucoprotein: Blood serum, fetus, *Deutsch*, 669
Muscle: Adenosinetriphosphatase, *Mommaerts and Green*, 833
Myosin: Adenosinetriphosphatase, *Mommaerts and Green*, 833

N

Neurospora: Cytochromes, *Tissieres and Mitchell*, 241
Respiration, *Tissieres and Mitchell*, 241
Neurospora crassa: Carbon dioxide metabolism, *Heplar and Tatum*, 489
Nitrogen: Blood serum albumin, *Thompson*, 565
Fixation, soy bean root nodules, *Aprison, Magee, and Burris*, 29
Nuclease: Deoxyribo-. *See* Deoxyribonuclease
Ribo-. *See* Ribonuclease
Nucleic acid(s): Derivatives, antagonists, *Elion, Singer, and Hitchings*, 477
Liver, C^{14}-formate incorporation, *N*-methylformamide effect, *Barclay, Garfinkel, and Stock*, 875
Nucleoside(s): Pyrimidine. *See* Pyrimidine nucleoside
Nucleotide(s): Di-. *See* Dinucleotide
Diphosphopyridine. *See* Diphosphopyridine nucleotide
Mono-. *See* Mononucleotide

O

Oligosaccharide(s): Hyaluronic acid conversion to, enzymatic, *Weissmann, Meyer, Sampson, and Linker*, 417
Oxidase: Amine. *See* Amine oxidase
Choline. *See* Choline oxidase
Homogentisic acid. *See* Homogentisic acid oxidase
Xanthine. *See* Xanthine oxidase

P

Pancreas: Deoxyribonuclease, mono- and dinucleotides, isolation, relation, *Sinsheimer*, 445
Papain: Arginyl dipeptides, synthesis, relation, *Van Orden and Smith*, 751
Pea: Leaf and root, pentose phosphate conversion to hexose monophosphate, effect, *Gibbs and Horecker*, 813
Seeds, cystine reductase, *Romano and Nickerson*, 409
Pentose phosphate: Hexose monophosphate from, pea leaf and root, effect, *Gibbs and Horecker*, 813
Phenylalanine: Metabolism, *Escherichia coli* effect, *Simmonds, Dowling, and Stone*, 701
Phosphatase: Adenosinetri-. *See* Adenosinetriphosphatase
Alkaline, beryllium poisoning, aurintricarboxylic acid protection mech-

Phosphatase—*continued:*
anism, relation, *Schubert and Lindenbaum*, 359
Glucose-6-. *See* Glucose-6-phosphatase
Propionibacterium pentosaceum, fluoride effect, *Volk*, 777
Phosphate: Adenosinetri-. *See* Adenosinetriphosphate
Phosphorylase: Biosynthesis, *Heimberg and Velick*, 725
Phosphorylation: Aerobic, choline oxidation relation, *Rothschild, Cori, and Barron*, 41
Pipecolic acid: Determination, *Schweet*, 603
Placenta: Δ^5-Pregnen-3β-ol-20-one conversion to progesterone, effect, *Pearlman, Cerceo, and Thomas*, 231
Plant(s): Transamination, *Wilson, King, and Burris*, 863
Plasmin: Substrates, synthetic, action, *Troll, Sherry, and Wachman*, 85
Polysaccharide: Syntheses, yeast, *Chung and Nickerson*, 395
Porphyrin(s): Dicarboxylic, methyl esters, chromatography, paper, *Chu and Chu*, 537
Pregnen-3β-ol-20-one: Δ^5-, progesterone conversion to, placenta effect, *Pearlman, Cerceo, and Thomas*, 231
Progesterone: Carbon 14-labeled, administration effect, *Shen, Elliott, Doisy, and Doisy*, 133
Δ^5-Pregnen-3β-ol-20-one formation from, placenta effect, *Pearlman, Cerceo, and Thomas*, 231
Prolidase: Specificity, glycyl-L-proline relation, *Adams, Davis, and Smith*, 573
Proline: Determination, *Schweet*, 603
Glycyl-L-. *See* Glycyl-L-proline
Propionibacterium pentosaceum: Phosphatase, fluoride effect, *Volk*, 777
Prostate: Citric acid synthesis and degradation, enzyme mechanisms, *Williams-Ashman and Banks*, 337
Protein: Muco-. *See* Mucoprotein
Thyroxine-binding, blood serum, *Petermann, Robbins, and Hamilton*, 369
Protein—*continued:*
Turnover, tritium as tracer, *Thompson and Ballou*, 883
Pyridine nucleotide-menadione reductase: *Escherichia coli, Wosilait and Nason*, 785
Pyrimidine nucleoside(s): Substituted, degradation, *Escherichia coli* and *Bacillus subtilis*, effect, *Slotnick, Visser, and Rittenberg*, 217
Pyruvic carboxylase: *Acetobacter suboxydans, King and Cheldelin*, 821

R

Reductase: Cystine. *See* Cystine reductase
Pyridine nucleotide-menadione. *See* Pyridine nucleotide-menadione reductase
Respiration: Tissue membranes, determination, *Kirk, Hansen, Efferspe, and Iversen*, 17
Rhodopseudomonas gelatinosa: Acetone metabolism, photosynthetic, effect, *Siegel*, 205
Riboflavin: Biosynthesis, *Plaut*, 513
Ribonuclease: Kidney, *Roth*, 181
Liver, *Roth*, 181
Riboside: Thiouracil. *See* Thiouracil riboside
— deoxy-. *See* Thiouracil deoxyriboside

S

Saccharide(s): Galactosyl oligo-. *See* Galactosyl oligosaccharide
Oligo-. *See* Oligosaccharide
Saccharomyces cerevisiae: Valine biosynthesis, *McManus*, 639
Soy bean: *See* Bean
Stercobilinogen: Mesobilirubinogen, nitrogen 15-labeled, conversion to, fecal bacteria, effect, *Lowry, Ziegler, Cardinal, and Watson*, 543
Steroid(s): $C_{19}O_2$, mixtures, separation and identity, chromatography, paper, *Arroyave and Axelrod*, 579
Sugar: Mixtures, determination, anthrone reagent use, *Mokrasch*, 55

T

Testosterone: Methyl-. *See* Methyltestosterone

Thiouracil deoxyriboside: Synthesis, enzymatic, *Strominger and Friedkin*, 663

Thiouracil riboside: Synthesis, enzymatic, *Strominger and Friedkin*, 663

Thrombin: Substrates, synthetic, action, *Sherry and Troll*, 95

Thymine: Uracil conversion to, *Bacillus subtilis* effect, *Rege and Sreenivasan*, 471

Thyroxine: -Binding protein, blood serum, *Petermann, Robbins, and Hamilton*, 369

Thyroglobulin: Blood serum, iodine 131 therapy, effect, *Robbins*, 377
Robbins, Petermann, and Rall, 387

Tissue(s): Lipogenesis, fasting effect, *Hutchens, Van Bruggen, Cockburn, and West*, 115
Membranes, respiration, determination, *Kirk, Hansen, Effersøe, and Iversen*, 17

Transamination: Plants, *Wilson, King, and Burris*, 863

Tritium: Lipide turnover, use as tracer, *Thompson and Ballou*, 883
Metabolic turnover, use as tracer, *Thompson and Ballou*, 883
Protein turnover, use as tracer, *Thompson and Ballou*, 883

Trypsin: Arginyl dipeptides, synthesis, relation, *Van Orden and Smith*, 751

Trypsin—*continued:*
Chymo-. *See* Chymotrypsin

Tyrosine: Metabolism, *Escherichia coli* effect, *Simmonds, Dowling, and Stone*, 701
—, kidney, homogentisic acid oxidase relation, *Crandall and Halikis*, 629

U

Uracil: Thymine formation from, *Bacillus subtilis* effect, *Rege and Sreenivasan*, 471

Urine: Creatine determination, colorimetric, micro-, *Taussky*, 853
Dextran determination, *Roe*, 889

Uronic acid: Hyal-. *See* Hyaluronic acid

V

Valine: Biosynthesis, *Saccharomyces cerevisiae, McManus*, 639

X

Xanthine oxidase: Determination, manometric, *Dhungat and Sreenivasan*, 845
Tissues, determination, *Dietrich and Borries*, 287

Y

Yeast: Cystine reductase, *Romano and Nickerson*, 409
Polysaccharide syntheses, *Chung and Nickerson*, 395
See also Saccharomyces
